Use of Articles in the Pachyonychia Congenita Bibliography

The articles in the PC Bibliography may be restricted by copyright laws. These have been made available to you by PC Project for the exclusive use in teaching, scholarship or research regarding Pachyonychia Congenita.

To the best of our understanding, in supplying this material to you we have followed the guidelines of Sec 107 regarding fair use of copyright materials. That section reads as follows:

Sec. 107. - Limitations on exclusive rights: Fair use
Notwithstanding the provisions of sections 106 and 106A, the fair use of a copyrighted work, including such use by reproduction in copies or phonorecords or by any other means specified by that section, for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright. In determining whether the use made of a work in any particular case is a fair use the factors to be considered shall include - (1) the purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes; (2) the nature of the copyrighted work; (3) the amount and substantiality of the portion used in relation to the copyrighted work as a whole; and (4) the effect of the use upon the potential market for or value of the copyrighted work. The fact that a work is unpublished shall not itself bar a finding of fair use if such finding is made upon consideration of all the above factors.

We hope that making available the relevant information on Pachyonychia Congenita will be a means of furthering research to find effective therapies and a cure for PC.
A deltoid "hitch"—flexibility of humerus, elbow, and shoulder led to a false diagnosis on the case report. She was age 4 years, and had an acute onset of pain. There was no fever. The absence of pain led to a false diagnosis of infection. The pain was referred to the elbow. The patient was referred to a pediatric orthopedist, who made the correct diagnosis of elbow dislocation. The dislocation was reduced in the operating room. The patient was discharged home on a follow-up visit.

**Case 102:** Avulsion fracture (tripeptidyl peptide 1, T. B. H.)

**Etiology:**
- Fracture of humerus, elbow, and shoulder.
- Flexibility of humerus, elbow, and shoulder.
- False diagnosis of infection.

**Clinical Features:**
- Flexibility of humerus, elbow, and shoulder.
- Acute onset of pain.
- No fever.
- Pain referred to the elbow.

**Diagnosis:**
- Elbow dislocation.

**Treatment:**
- Reduction in the operating room.

**Follow-up:**
- Discharged home on follow-up visit.

---

**Case 103:** Avulsion fracture (tripeptidyl peptide 1, T. B. H.)

**Etiology:**
- Fracture of humerus, elbow, and shoulder.
- Flexibility of humerus, elbow, and shoulder.
- False diagnosis of infection.

**Clinical Features:**
- Flexibility of humerus, elbow, and shoulder.
- Acute onset of pain.
- No fever.
- Pain referred to the elbow.

**Diagnosis:**
- Elbow dislocation.

**Treatment:**
- Reduction in the operating room.

**Follow-up:**
- Discharged home on follow-up visit.
