A white film on the tongue is a feature of PC for some. Although this feature is not usually painful, it is often misdiagnosed in infants and treated as thrush.

Cysts are a feature of PC...

Extra keratin forms around each hair follicle. These plugs are painful and can be painful.

Blisters and calluses on PC feet are painful. The blisters hurt a lot. It's kind of difficult to explain how hard it is to live with PC. You have to find a way to survive and live with pain basically.

"If you have PC, you get blisters all over your feet (and sometimes on your hands). The blisters hurt a lot. It's kind of difficult to explain how hard it is to live with PC. You have to find a way to survive and live with pain basically.

Sometimes people run away and think I'm gross because I have PC. I feel sad and lonely. I just get this feeling that I'm alone in the world. When this happens, I just go and find something to do, and I've got this friend I've had since kindergarten and I just go play with him if I feel really sad and we go have fun.

Through the IPCRR, we have learned that PAIN is the most common feature of Pachyonychia Congenita.

"Right now there is no drug or medicine or lotion or cream a person with PC can take to stop their PC pain."

There is currently no effective treatment for PC.
